Main Objective

The objective of the application is to fetch cats images from https://imgur.com, and show the images on gallery.

Fetching the images

To fetch the images url, imgur requires two keys, you can use the following, or create a new pair if necessary.

CLIENT ID	CLIENT SECRET
1ceddedc03a5d71	63775118a9f912fd91ed99574becf3b375d9eeca

You can send a GET to the following url to fetch the cat images, don't forget to include Client-ID on header authorization key, you can check if the API is working using the command line, For more information about the imgur use visit https://imgur.com

curl --header "Authorization: Client-ID 1ceddedc03a5d71" https://api.imgur.com/3/gallery/search/?q=cats

Showing the images

Create an iOS app with just one screen to show the fetched images in a gallery, use UICollectionView to display the gallery.

When you are done, create a public repository on Github and submit the code for evaluation.
